

# Pype | AUTOSPECS

Generate submittal logs in minutes (not weeks).

## Smart Register

Automatically generate your submittal logs in minutes. All items linked automatically to the spec book

## Products

Easily identify products specified in Specs and helps you build your material expediting logs

## Versioning

Compare and contrast between your spec documents as they change

## Tests and Inspections

Understand and execute all your QA/QC requirements and stay contract compliant

## Integrations

Pype integrates with leading PM software

## SpecView

Analyze the specs and submittal log side by side

## Enterprise

Admin console to monitor usage & user access controls

## TRUSTED BY TOP ENR FIRMS

Rogers-O'Brien  
CONSTRUCTION

**project  
engineers**

## build with confidence

- Significantly reduce man hours by eliminating the need to manually input submittal requirements
- Understanding key submittal types in minutes instead of weeks or months
- Better utilize human resources for higher level tasks

**project  
managers**

- Quickly deliver submittal schedules to A/E after contract award
- Improve contract compliance by flagging all contract submittal requirements
- Easily send logs to subs
- Avoid scope gaps by using comprehensive submittal logs

**estimators**

- Use qualitative spec data and easily understand connections with quantitative data
- Help your bid packages stand out by including submittal logs
- Easily identify specs that will impact costs
- Flag spec changes using versioning
- Forecast general conditions costs based on administrative requirements on the project
